

Tools Required: (Not included)

- A. Phillips head screwdriver

⚠ WARNING

Do not use non-Razor products with your Razor electric scooter. The scooter has been built to certain Razor design specifications. Certain aftermarket parts may or may not be compatible.

As with all consumer electronics, use of compatible batteries and chargers is strongly recommended. Failure to do so may pose a fire hazard.

Examine the battery, charger and their connectors for excessive wear or damage each time you charge the battery. If damage or excessive wear is detected, do not use the charger or the vehicle until you have replaced the worn or damaged part.

Battery connectors may contain lead and lead compounds. **Wash your hands after handling.**

⚠ CAUTION: To avoid potential shock or other injury, turn power switch **OFF** and disconnect charger before removing or installing the batteries. Failure to follow these steps in the correct order may cause irreparable damage.

Step 1

Lift the Pocket Mod seat.

Figure 1

Step 2

Using a Phillips head screwdriver, remove the four screws in the seat compartment.

Figure 2

Step 3

Lift up the seat compartment and remove the bracket on top of the batteries.

Figure 3

Step 4

Locate the white plastic connector on the batteries. Carefully cut the zip tie holding the wires together and discard it. Disconnect the white plastic connectors attached to the batteries and control module by depressing the tab

Figure 4

Step 5

Unfasten the battery strap.

Figure 5

Step 6

Carefully lift the batteries out of the battery tray, one battery at a time. See page 3 for battery care and disposal information.

Figure 6

Step 7

Reverse steps:

1. Place the new batteries inside the battery tray.
2. Re-fasten the battery strap around the battery.
3. Reconnect white plastic connectors for the battery and control module.
4. Place the bracket back on the top of the battery.
5. Reattach seat compartment insert using the four screws previously removed and close the seat.

ATTENTION: Charge unit at least 18 hours before riding.

Battery Care

⚠ WARNING: If a battery leak develops, avoid contact with the leaking acid and place the damaged battery in a plastic bag. Refer to the disposal instructions below. If acid comes into contact with skin or eyes, flush with cool water for at least 15 minutes and contact a physician.

Battery Care:

Charge a new battery for at least 18 hours before you use it in your product for the first time. Never charge the battery longer than 30 hours. Overheating or undercharging the battery may shorten battery life and decrease product run time.

After the first charge, recharge the battery for at least 12 hours after each use. Charge the battery after each use, regardless of how long the product was used.

Do not allow the battery to run down completely before charging.

Charge the battery at least once per month, even if the product has not been used.

Charge the battery before storing the product. Leaving the battery in a discharged condition can result in a battery that will no longer take a charge.

Do not store the battery in temperatures above 75°F or below -10°F.

Charger:

The charger supplied with the scooter should be regularly examined for damage to the cord, plug, enclosure and other parts and in the event of such damage, the scooter must not be charged until the charger has been repaired or replaced.

Battery Disposal

CONTAINS SEALED LEAD-ACID BATTERY. BATTERY MUST BE RECYCLED.

Your Razor product uses sealed lead-acid batteries which must be recycled or disposed of in an environmentally sound manner. Do not dispose of a lead-acid battery in a fire. The battery may explode or leak. Do not dispose of a lead-acid battery in your regular household trash. The incineration, land filling or mixing of sealed lead acid batteries with household trash is prohibited by law in most areas. Return exhausted batteries to a federal or state approved lead-acid battery recycler or a local seller of automotive batteries. If you live in Florida or Minnesota, it is prohibited by law to throw away lead-acid batteries in the municipal waste stream.
