

Tools Required: A. 5mm Allen wrench
B. 13mm Allen wrench

C. 19mm open wrench

Step 1

Using two 5mm Allen wrenches, remove the rear wheel from the caster. Using a 13mm open wrench, remove the bolt on the bottom of the caster then remove caster.

Figure 1

Step 2

Using a 13mm and 19mm open wrench, remove the bolt from the replacement caster.

Note: When removing the bolt, hold the thrust bearing plate firmly against the caster to prevent the ball bearings from falling out.

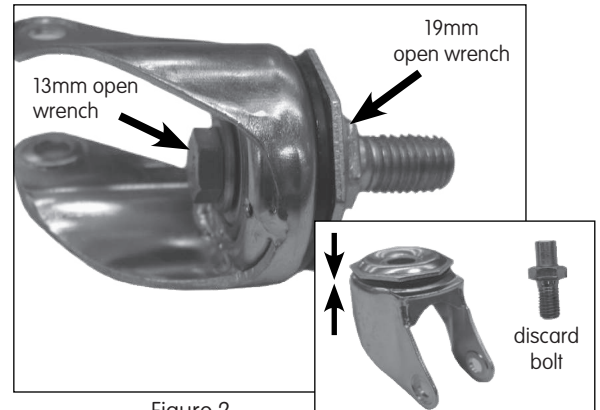

Figure 2

Step 3

Insert replacement caster onto the existing bolt on the platform.

Figure 3

Step 4

Using a 13mm open wrench, tighten bolt until caster is securely in place.
